2
3 """
4     Demo - Adding a right click menu to perform multiline element common operations
5
6     Sometimes Multiline Elements can benefit from a right click menu. There are no default menu
7     that come with tkinter, so you'll need to create your own.
8
9     Some common clipboard types of operations
10     Select all
11     Copy
12     Paste
13     Cut
14
15     The underlying Widget is accessed several times in this code because setting selections,
16     getting their values, and clipboard operations are not currently exposed in the APIs
17
18     NOTE - With tkinter, if you use the built-in clipboard, you must keep your program
19     running in order to access the clipboard. Upon exit, your clipboard will be deleted.
20     You can get around this by using other clipboard packages.
